

Day 1 demo — what ICR asked for, shown live

Three parts, about 30 minutes: (1) effective dating and its 10 phases, (2) the HESA Engagement, (3) XML output. Each part has a plain-words summary, the clicks, and what to say.

Part	ICR items	Time
1. Effective dating — 10 phases	1.4, 4.3, 1.12, 1.13, 1.3, 1.5, UOA	~18 min
2. HESA Engagement and Leaver	1.7	~6 min
3. XML output	1.10	~4 min
Close	Still to do, questions for ICR	~2 min

Before the demo

1. Start the backend and frontend; log in as the institution administrator (Default Institution).
2. Search **ED-DEMO** in Students — two demo students: **ED-DEMO-01** (Alex Dated) and **ED-DEMO-02** (Sam Transfer).
3. Statutory → **HESA Student Return 2025/26** → Sign-off: if v1 shows *As at 2026-10-05*, click **Unsign**, then **Sign off** again with “Snapshot as at” left blank (= 31 Jul 2026). That makes v2.
4. Keep the PDF *Effective_Dating_Asked_vs_Built.pdf* ready to hand over at the end.

Demo student	Story
ED-DEMO-01	Alistair's example: live from Aug 2025 → 60% from 5 Jan 2026 → interrupted 2 Mar → back 1 Jun → interrupted again 7 Sep 2026 (still interrupted today)
ED-DEMO-02	Transfers from ICR PhD to MD(Res) on 2 Feb 2026

Part 1 — Effective dating

Say

“We didn't add a history screen. We changed how the platform stores anything that changes over time: every change is dated, every return can be rebuilt as it stood on any date, and a submitted return can't be silently changed. The Dated history tab is where you see it all.”

The 10 phases in plain words

#	Phase	In plain words	Show it here
1	Status	A status change needs a date and a reason ; the old status is kept	Lifecycle → Request... (writing up, withdrawal, termination)
2	Programme + study load	Transfers and study % are dated ; the year's load is worked out day by day	Excel: STULOAD 62; transfer = two rows
3	Modules	Each module has start / end dates and a dated status	Approving a suspension offers to interrupt open modules
4	Funding + supervisors	From-to periods ; replace a supervisor from a date	Funding and Supervision tabs
5	Protection + viewing	Warning if a change hits a signed-off return; as of a date view; only the returns team can change a signed-off year	Dated history tab; amber warning
6	More facts	Fee status, location, chosen custom fields are dated	Record tab → Engagement and dated facts
7	Snapshot	Return as at a date and as known at a moment ; frozen at sign-off	Statutory → Frozen returns
8	Versions	Modules and programmes have versions from a date ; a cohort keeps its version (CMA); module FTE	Settings → Programmes → Versions
9	Unit of assessment	Student and supervisor UOA dated	Settings → Units of assessment; person page
10	Engagement + Leaver	HESA Engagement and Leaver built from the dated history	Part 2 of this demo

1A. History like an HR system (2 min)

1. Open **ED-DEMO-01** → **Journey** tab → **Lifecycle changes**: four approved changes, each with requester, approver and reason. Expected end: originally 30 Sep 2028 → now Jan 2031.
2. **Dated history** tab: one timeline — active → suspended → active → suspended; 100% → 60%. Who recorded each one, and when.

1B. Alistair's “1 August” example — as at a date (3 min)

Dated history tab → **As of a date**. Type each date:

Date	Shows	Why
2025-08-01	Active, full time	Live in August
2026-04-01	Suspended, 60%	Inside the March–June interruption

Date	Shows	Why
2026-07-31	Active, 60%	Back since June
today	Suspended	Interrupted again in September

1C. The return reads the history (3 min)

1. Statutory → **HESA Student Return 2025/26** → Validate (0 errors) → **Review workbook (Excel)**.
2. Filter OWNSTU on **ED-DEMO**. ED-DEMO-01: **STULOAD 62** (100% to January, 60% after, nothing while interrupted), MODE 02. ED-DEMO-02: **two rows** — PhD to 1 Feb, MD(Res) from 2 Feb.

Say

“Without effective dating this student would show as suspended for the whole year, load 60, and the transfer would be one row on the wrong programme.”

1D. Snapshot and protecting a signed-off return (4 min)

1. 2025/26 → **Frozen returns**: v2, as at year end. Download its Excel.
2. ED-DEMO-01 → Journey → **Request...** → Intensity change to **80%** from **2026-06-15**. The pending row warns it reaches the signed-off 2025/26 return. **Approve** (your role has the returns permission; a PGR Administrator would be refused).
3. Back on the return: **“1 student changed since sign-off”** — expand it.
4. Download v2 again: unchanged, STULOAD still 62. Late changes never alter a signed-off return.

1E. Module FTE check (3 min)

1. Statutory → **HESA Student Return 2026/27** → Validate: **17 warnings**, field FTE.
2. Most are MSc Clinical Oncology students at **83.33%**: modules ONC501–504 (66.67%) + dissertation (16.67%) — they're not enrolled on the core module **RES701**, so they really are 30 credits short. (MSc Clinical Neurology shows 50% because its total credits aren't set.)
3. Settings → Institution policy → Statutory reporting → check = **Stop** → Validate: the 17 become **errors** and block sign-off. Set it back to **Warn**.

1F. Versions and UOA — quick tour (1 min)

1. Settings → **Programmes** → a programme → **Versions**: each cohort pinned to its version; a version with students can't be edited. Module versions sit in the programme's modules editor.
2. Settings → **Units of assessment**; a supervisor's UOA is dated on their person page.

Part 2 — HESA Engagement and Leaver

In HESA Data Futures a person is the **Student**; each registration on a course is an **Engagement**. In our platform the Engagement is the student record. Every Engagement value is taken **as it stood at the time**, from the dated history.

Engagement field (HESA)	Where it comes from
Number (NUMHUS)	The student reference
Start date (ENGSTARTDATE)	The student's start date
Expected end (ENGEXPECTEDENDDATE)	Dated — the expected end as held at the time
Fee eligibility (FEEELIG)	New dated fact
Primarily outside the UK (ENGPRINONUK)	New dated fact (yes / no)
Study intention; incoming exchange	New fields on the student
Research council student (RCSTDNT); studentship ref (UKRISRN)	Worked out from the funding in force at the time
Leaver: end date (ENGENDDATE), status	The withdrawal / termination / completion
Leaver: reason (RSNENGEND)	New “why the student is leaving the programme” on the request

Demo (6 min)

1. ED-DEMO-01 → **Record** tab → **Engagement and dated facts**: fee status, fee eligibility, location, primarily outside the UK, UOA — each with **Change** → new value + **From** date + **Reason**. Study intention and incoming exchange edit in place.
2. Change **Fee eligibility** from a date with a reason → open **Dated history**: it's there, with who and when.
3. Journey → **Request...** → choose **Withdrawal**: show the “**Why the student is leaving the programme**” list (the HESA leaving reason). **Cancel** — **don't submit**.
4. Statutory → **Fields** tab → add a field: the source list has **Engagement** · and **Leaver** · entries labelled with their HESA codes.

Not built yet — say it plainly

Engagement *evidence* (attendance, VLE activity) proves a student is studying. It needs a feed from ICR's systems through the integration API — ask ICR which feeds they want.

Part 3 — XML output

The return can now be downloaded as XML, next to CSV and Excel — for the live return and for every frozen (signed-off) version.

What	How it looks
Header	Return code, year, as-at and as-known-at dates, record count, validation counts
Records	One <Record> per row; one element per HESA field code (<OWNSTU>, <STULOAD>, <MODE> ...)
Values	Exactly the CSV's text — leading zeros kept; empty fields left out

Demo (4 min)

1. Statutory → 2025/26 → **Generate** → click **XML** (next to Review workbook). Open it and find ED-DEMO-01: **STULOAD is now above 62** — the live return already includes the 80% change you back-dated in 1D.
2. Sign-off → **Frozen returns** → v2 → **XML**: ED-DEMO-01 still has **<STULOAD>62</STULOAD>** — the signed-off return as it was, with its version and snapshot dates.
3. Point out: the same data in three formats — CSV to submit, Excel to review, XML.

Be upfront

This XML is one level: a record per row. HESA Data Futures nests entities (Student → Engagement → course session → status / module instance) and is checked against the collection's XSD. The data for that nesting already exists (status periods, modules, engagement); mapping it to the XSD is next, once we have the schema file.

Close (2 min)

Hand over *Effective_Dating_Asked_vs_Built.pdf*. Still to do:

- Amend and resubmit a signed-off return (1.11).
- XML nested to the HESA Data Futures schema, validated against the XSD (1.10).
- Engagement evidence — attendance and VLE feeds (1.7).
- FEESTAT code mapping from the dated fee status.

Ask ICR

- The FEESTAT coding they use.
- Which engagement evidence feeds they want (attendance, VLE).
- The HESA collection XSD they submit against.

After the demo (optional reset)

Statutory → 2025/26 → Unsign if you want to repeat the sign-off steps. The demo students and the 2025/26 return can stay — they're labelled "(demo)".
