

Statutory reporting — draft a HESA return, reconcile, sign off, file

WHAT IT IS

HESA (Higher Education Statistics Agency), OfS, research council returns — all built from the same Enterprise 360 read model that runs internal analytics. In this chapter we open the current-cycle HESA return draft (Priya's registration in this demo has already contributed a row), check the reconciliation banner, sign it off, and watch the filing task land in the integration outbox.

THE CLICKS

01 Show the shared source of truth

WHERE Sidebar → **Analytics** (globe icon).

DO Show the five-lens tabs across the top of the table: Student / Research / Funding / Workforce / Statutory.

SEE One row per person. Switching tabs re-projects the same rows through different fields.

SAY *“One row per person. Five lenses. Every internal report and every statutory return draws from this same view.”*

02 Open the HESA draft

WHERE Sidebar → **Statutory** → **HESA Student return** → **Current cycle**.

DO Show the draft return.

SEE One row per student in scope, statutory fields down the columns, reconciliation banner at the top.

SAY *“Draft return. Fields are the HESA schema; rows come straight off the 360 view.”*

03 Reconcile

WHERE Top of the return page.

DO Point at the reconciliation row: "Matches operational totals" in green.

SEE Green tick. Deltas column empty.

SAY *“The return numbers reconcile with operational screens by construction — because there's only one source.”*

04 Sign it off

WHERE Top-right → **Sign off** button.

DO Click. Modal asks for a sign-off note ("reviewed against operational totals, no outstanding queries"). Confirm.

SEE Status flips from "Draft" to "Signed off" with your name and timestamp.

SAY *“Sign-off is a workflow transition. Preserved forever with who and when.”*

THE LINE

“The dashboard and the HESA return are the same numbers, always. No sub-reports drifting from the source.”
