

AI — Weekly review queue · watch the trace, then turn Wi-Fi off

WHAT IT IS

A deterministic scorer runs every active student against three signals — overdue milestones, funding gaps, expected end-date proximity — producing a scored table. The AI layer picks the top five with one sentence of reasoning per pick, from ids in the shortlist only. **Turn the model off** and the page still works: same evidence table on the right, top-five picks in score order on the left, chip flips from purple to grey. This is the flagship example of "AI as a layer, not a component" — and the demo moment the audience will remember.

THE CLICKS

01 Open Weekly review

WHERE Sidebar (under WORKSPACE) → **Weekly review** (sparkle icon, just below "Tasks").

DO Click. Do not touch the mouse for the next 3 seconds.

SEE Gradient pane appears. Four icons light up in turn: ■■ database → ■ calculator → ■ sparkles (pulses) → ■ layout.

SAY *“Every step is real server work — not a fake spinner. Fetch, weigh, wake the model, lay it out.”*

02 Point at the AI chip

WHERE Header of the left card — small pill next to "Top 5 to review this week".

DO Point at it. Purple = model-authored. Grey = fallback.

SEE Currently purple: ■ **Drafted just now**.

SAY *“Every AI-touched element in this app carries this pill. The reader knows in one glance what came from the model.”*

03 Cross-reference to the evidence

WHERE Right column — the "Evidence" table.

DO Point at a row highlighted faint red-brown — one of the AI's picks. Then point at the matching name on the left.

SEE Every pick on the left has its exact score and reasons on the right, verbatim.

SAY *“Picks left, deterministic evidence right. The AI can't invent a name that isn't on that table.”*

04 The model-off drill — the moment of truth

WHERE System tray → Wi-Fi icon.

DO Turn Wi-Fi off. Back in the app, click **Run again** (top-right).

SEE Trace still ticks. Chip flips to grey ■ **Generated offline**. Picks come back in pure score order with rule-based reasoning ("Flagged by: 2 milestone(s) overdue").

SAY *“Model off. The page still works. Chip is honest about it. That's the whole architectural commitment — AI is a layer, not a component.”*

THE LINE

“Turn the model off. The page still works. That's the test.”
